

IN THE CLAIMS:

Please amend claim 1. Please add new claims 8-23. Pending claims 1-23 follow.

1. (Currently Amended) A method for making a fresh cheese comprising:
pasteurizing and acidifying one or more dairy components to obtain a cheese dairy product;
coagulating the cheese dairy product to form a coagulum comprising curd and whey;
cutting the coagulum and removing the whey thereby leaving the curd;
heating the curd using steam and kneading the curd to produce a fibrous mass;
the coagulating, cutting, heating and kneading steps being performed without intermediate freezing, cold storage or packing;
before or during heating, adding to the curd or to the fibrous mass an extender, the extender comprising at least one source of fat;
cutting the fibrous mass into sections;
cooling the fibrous mass sections in brine; and
processing the cooled fibrous mass sections to produce a cheese product.
2. (Original) The method of claim 1, wherein the at least one source of fat is present in the extender in an amount of at least about 0.5 wt.%.
3. (Original) The method of claim 1, wherein the at least one source of fat is present in the extender in an amount ranging from about 0.5 wt.% to about 30 wt.%.
4. (Original) The method of claim 1, wherein the at least one source of fat is selected from the group consisting of butter, plastic cream, plastic fat, anhydrous milk fat, cream, whey cream, vegetable fat, and animal fat.
5. (Original) The method of claim 1, wherein the extender further comprises one or more low cost solids.

6. (Original) The method of claim 5, wherein the low cost solids are selected from the group consisting of starch, maltodextrin, and nonfat milk solids.
7. (Original) The method of claim 1, wherein the extender further comprises water.
8. (New) The method of claim 1, heating further comprising heating the curd comprising heating the curd with a closed system processor.
9. (New) The method of claim 1, the viscosity of the extender being approximately the same as a viscosity of the curd during heating.
10. (New) The method of claim 1, further comprising extruding the fibrous mass as a continuous rope, wherein cutting the fibrous mass into sections comprises cutting the extruded continuous rope into sections.
11. (New) The method of claim 10, extruding comprising extruding a fibrous mass having a unidirectional protein structure orientation.
12. (New) The method of claim 11, further comprising cutting the cheese product parallel to the direction of the protein structure.
13. (New) The method of claim 1, further comprising feeding the fibrous mass through a water bath prior to cutting the fibrous mass into sections and cooling the fibrous mass sections in brine.
14. (New) The method of claim 1, feeding comprising feeding the fibrous mass through a water bath so that the fibrous mass is cooled to a temperature of about 110-150°F.
15. (New) The method of claim 1, cooling the fibrous mass sections in brine comprising cooling the fibrous mass sections in brine having a temperature of about 20-30°F.

16. (New) The method of claim 1, cooling the fibrous mass sections in brine comprising cooling the fibrous mass sections in brine for about 15-90 minutes.

17. (New) The method of claim 1, the fibrous mass sections being soaked in the brine until the fibrous mass sections are cooled to a temperature of about 36 to 45°F.

18. (New) The method of claim 1, processing the cooled fibrous mass sections to produce a cheese product comprising
removing the cooled fibrous mass sections from the brine; and
rinsing the fibrous mass sections.

19. (New) The method of claim 1, the cheese product having a melting point of about 10 days.

20. (New) The method of claim 1, the cheese product having a shelf life about 60-90 days.

21. (New) A method of making cheese, comprising:
pasteurizing and acidifying one or more dairy components to obtain a cheese dairy product;
coagulating the cheese dairy product to form a coagulum comprising curd and whey;
cutting the coagulum and removing the whey thereby leaving the curd;
heating the curd using steam and kneading the curd to produce a fibrous mass;
the coagulating, cutting, heating and kneading steps being performed without intermediate freezing, cold storage or packing;
before or during heating, adding to the curd or to the fibrous mass an extender, the extender comprising at least one source of fat;
extruding the fibrous mass as a continuous rope;
cutting the continuous rope into fibrous mass sections;
cooling the fibrous mass sections in brine; and
processing the cooled fibrous mass sections to produce a cheese product.

22. (New) A method of making cheese, comprising:
pasteurizing and acidifying one or more dairy components to obtain a cheese dairy product;
coagulating the cheese dairy product to form a coagulum comprising curd and whey;
cutting the coagulum and removing the whey thereby leaving the curd;
heating the curd using steam and kneading the curd to produce a fibrous mass;
the coagulating, cutting, heating and kneading steps being performed without intermediate freezing, cold storage or packing;
before or during heating, adding to the curd or to the fibrous mass an extender, the extender comprising at least one source of fat;
extruding the fibrous mass as a continuous rope having a unidirectional protein structure orientation;
cutting the continuous rope into fibrous mass sections;
cooling the fibrous mass sections in brine;
processing the cooled fibrous mass sections to produce a cheese product;
aligning a blade of a cutting mechanism with the direction of the protein structure of the fibrous mass; and
cutting the cheese product parallel to the direction of the protein structure.

23. (New) A method for making a fresh cheese comprising:
pasteurizing and acidifying one or more dairy components to obtain a cheese dairy product;
coagulating the cheese dairy product to form a coagulum comprising curd and whey;
cutting the coagulum and removing the whey thereby leaving the curd;
heating the curd using steam and kneading the curd to produce a fibrous mass;
the coagulating, cutting, heating and kneading steps being performed without intermediate freezing, cold storage or packing;
before or during heating, adding to the curd or to the fibrous mass an extender, the extender comprising at least one source of fat; and
processing the fibrous mass to produce a cheese product.
